kapishtickoo.dev@gmail.com — linkedin.com/in/kapish-tickoo — github.com/kapish-18

Education

Vellore Institute of Technology (VIT), Vellore

2024 – 2028

Bachelor of Technology in Computer Science (Business Systems)

Experience

Software Engineer Intern (AI Data Ingestion)

May 2026 – July 2026

Vyntelligence

London, UK (Remote)

- Engineered a scalable 3-tier Python ETL pipeline to ingest synthetic data for AI workflows, processing 4,000+ highly nested JSON records with 100% success against live servers
- Automated API ingestion layers using `requests.Session` and `urllib3` to handle transient errors and 429 rate limits, syncing lifecycle states in real-time with a simulation engine
- Migrated manual pre-flight payload validation to `Pydantic` schemas, eliminating malformed data execution faults in production runtime

Projects

OneCart — Multi-Outlet Campus Food Delivery Platform

[App](#) — [GitHub](#)

React Native, Vite, Node.js/Express, MongoDB

- Architected a distributed 3-app ecosystem (React Native, Vite, Node.js/Express) for multi-outlet campus food ordering in a single checkout flow
- Resolved concurrent order race conditions using MongoDB atomic operations (`findOneAndUpdate`), ensuring data integrity across status transitions
- Engineered secure payment and alert systems integrating Razorpay (HMAC-SHA256 verification) and Firebase/Expo push notifications

TrueFit — Offline-First Intelligent Strength Training App

[App](#) — [GitHub](#)

React Native, Expo, SQLite, Zustand

- Engineered an 8-module recommendation engine (progressive overload, fatigue scoring, deload planning, joint-safety validation) delivering real-time recommendations from a self-authored dataset of 84 exercises across 13 muscle groups
- Designed a normalized relational schema in SQLite (10+ tables with foreign keys and cascading deletes) behind a centralized DAO layer, using parameterized queries and column allow-listing to prevent SQL injection
- Configured a GitHub Actions CI/CD pipeline to automatically trigger EAS cloud builds on every push to `main`, publishing signed APKs directly to GitHub Releases — eliminating all manual build steps

Technical Skills

- **Languages:** JavaScript, TypeScript, Java, Python, C++
- **Frontend & Mobile:** React, React Native (Expo), Expo Router, Zustand, Vite, Tailwind CSS, Offline-First Architecture
- **Backend & Data:** Node.js, Express.js, REST APIs, ETL Pipelines
- **Database & Cloud:** MongoDB, Mongoose, SQLite, AWS (S3, QuickSight), Firebase
- **Libraries:** Pydantic, `requests`, `urllib3`, `unittest.mock`, `react-native-reanimated`, `react-native-gifted-charts`
- **Tools & Concepts:** Git, GitHub Actions (CI/CD), Render, Postman, Atomic DB Operations, Unit Testing, Razorpay, Relational Schema Design, Algorithm Design, SQL Injection Prevention

Achievements

- Finalist at Google Developer Student Club (GDSC) Hackathon, VIT Vellore
